

Undergraduate Research Opportunities

We have many ongoing research projects in the Human-Computer Interaction Lab providing ample opportunities for undergraduate students to gain valuable research experience. Students have the opportunity to work with faculty, graduate students, and other undergraduate students on a variety of research projects. The majority of the projects in the lab are related to relationships between people and technologies in health systems, so students who have taken courses in human factors, health systems, and human-computer interaction are especially encouraged to apply. Undergraduate researchers can participate as volunteers or for independent study credit. Funded opportunities may be available pending successful completion of research project.

Requirements: Students must be willing to commit to the project for at least one semester. Current positions may have additional requirements.

How to: Please email Dr. Montague at emontague@wisc.edu; include undergraduate research in the subject. Include a short paragraph that describes why you are interested in undergraduate research. After the email is received you will be invited to participate in a short interview.

Important Note: The positions listed here are exclusively for students enrolled at the University of Wisconsin-Madison. There is no payment other than academic credit. You must be a UW-Madison student to apply for these positions.

Notes regarding course credit: Three or four hours of work per week is required for each hour of credit. Students may carry no more than 3 credit hours each semester. Students will read material related to the project and the student will be expected to produce a piece of written work (evaluated by the faculty member).

Prerequisites: Students must have sophomore, junior, or senior standing. Ideal candidates will be excited about research, able to work independently and with a team, and self motivated.
